

PRATHEEKSHA KAJAGAR

Bengaluru, India • Student (MCA) • +91 7204460356 • pratheeksha5821@gmail.com

PROFESSIONAL SUMMARY

MCA student specializing in AI/ML with hands-on experience across machine learning, full-stack development, and frontend design. I like building things end to end from the logic behind the scenes to how it looks and feels for the user. I'm equally comfortable working on data and models as I am on interfaces and products. Currently looking for real-world experience where I can contribute, learn fast, and grow.

FEATURED PROJECTS (GITHUB: github.com/PratheekshaKajagar)

FraudGuard — Fraud Detection & AI Insights Platform | *Python · XGBoost · Scikit-learn · Streamlit · Groq API*

- ▶ Built a full-stack ML application to detect fraudulent transactions and provide real-time risk scores with AI-generated explanations.
- ▶ Designed an interactive dashboard with fraud trends, category breakdowns, and transaction-level analysis.
- ▶ Implemented a searchable transaction log with filtering and CSV export for practical usability

F1 2026 Race Predictor — ML Forecasting Pipeline | *Python · FastF1 API · Scikit-learn · Pandas*

- ▶ Developed an end-to-end ML pipeline to predict race outcomes using historical telemetry and engineered features.
- ▶ Built multiple models including a podium classifier, position regressor, and season-level championship predictor.
- ▶ Integrated real-world variables like team performance tiers and regulation changes to improve prediction realism.
- ▶ Created a lightweight dashboard to visualize predictions via CSV uploads

Velora AI Analyst — Natural Language to SQL Engine | *Python · Flask · SQLite · Groq API · HTML/CSS*

- ▶ Built a web app that converts plain English queries into SQL, enabling non-technical users to query databases.
- ▶ Designed a schema-agnostic system that works across different datasets without modification.
- ▶ Implemented query history tracking and dashboard visualizations for business insights.
- ▶ Reduced manual reporting effort by automating data retrieval and analysis workflows

FlexFit — Progressive Fitness Tracker | *React · JavaScript · CSS*

- ▶ Built a full-stack single-page application to guide users through a structured 30-session Bro Split training program with sequential workout unlocking logic.
- ▶ Engineered client-side state management using React hooks (useState, useEffect) and localStorage for zero-backend progress persistence across sessions.
- ▶ Designed a complete dark-theme design system from scratch — custom CSS variables, glassmorphism cards, fluid typography with clamp(), and a responsive grid layout.
- ▶ Implemented a React Portal modal system for exercise technique overlays and a dynamic workout grid with per-exercise weight logging and completion validation.

YouTubeGestureControl — Real-Time Computer Vision App | *Python · MediaPipe · OpenCV*

- ▶ Achieved sub-15ms CPU hand-landmark inference using MediaPipe (21 3D landmarks per frame, 6 gesture classes), applied an Exponential Moving Average filter to eliminate jitter from pinch-distance volume readings — demonstrating model optimisation and signal processing under latency constraints.

- Solved a non-obvious OS edge case: Windows 10/11 silently blocks SetForegroundWindow() for background processes; implemented the AttachThreadInput() workaround (the same fix AutoHotkey uses) to guarantee reliable focus switching — shipped software, not a broken demo.

TECHNICAL SKILLS

AI / ML: Python, Scikit-learn, Pandas, NumPy, Feature Engineering, Model Evaluation

Backend / APIs: Flask, REST API design, SQLite, Firebase Realtime DB, Mysql

Computer Vision: OpenCV

Data & ETL: Pandas, FastF1 API, data cleaning, EDA, visualisation (Matplotlib / Seaborn)

Web / Mobile: HTML, Python, Android Studio, Java, XML, Androidstudio

Cloud & DevOps: AWS Cloud basics, Firebase

Soft Skills: Research, Technical Documentation, Team Collaboration, Time Management

EDUCATION

Masters of Computer Applications (MCA) | Jain (Deemed-to-be) University, Bengaluru •2025 – *present*

Specialisation: Artificial Intelligence and Machine Learning

Current SGPA: 8.3

Bachelor of Computer Applications (BCA) | Jain (Deemed-to-be) University, Bengaluru •2022 – 2025

Specialisation: Mobile Application & Cloud Technology

CGPA: 8.98

CERTIFICATIONS

- Essentials of Cloud Computing
- Python Development — Infosys Springboard
- Java and XML — Infosys Springboard
- AWS Data Centers – Schneider Electric

LANGUAGES

English (Professional) • Hindi (Fluent) • Kannada (Native)
